How to install and run MFA on windows (literally the only way)
Official website: https://montreal-forced-aligner.readthedocs.io/en/latest/installation.html

Run these in Anaconda Prompt
In base
1. conda create -n aligner -c conda-forge montreal-forced-aligner
2. Conda activate aligner
In aligner environment
1. pip install speechbrain
2. Run python
    1. Import torch and kalpy to ensure it exists; If no errors, you are good
    2. Exit python
3. mfa model download acoustic english_us_arpa
4. mfa model download dictionary english_us_arpa
5. Finally, get your alignment
mfa align --clean "C:\Users\stell\onedrive\desktop\cans_lab\my_corpus"
english_us_arpa english_us_arpa
"C:\Users\stell\onedrive\desktop\cans_lab\my_corpus_aligned"

My_corpus: Your input data, needs to contain a .wav file and a .txt file. Must be named the same
My_corpus_aligned: Output file
1. Open the textgrid file in notepad.
